

Declaration to Recognize AMCA Certification

ADDRESSED TO
UNITED STATES CONGRESS

REVISED ON
MARCH 12, 2025

PRESENTED BY
DONALD LABELLE

AMCA Quality Standards was developed exclusively to revitalize the U.S. manufacturing sector, and increase the global competitiveness of U.S. manufacturers and allied industries. Companies achieving AMCA Certification are recognized for their commitment to quality, leadership integrity, and dedication to pro-American values.

AMCA Certified companies offers a variety of significant benefits to the federal government, defense contractors, American economy, and U.S. taxpayers as followed:

- AMCA Certification can only be achieved by suppliers adhering to strict quality requirements, ethical business practices, and pro-American guidelines.
- AMCA Standards are engineered exclusively for the U.S. custom manufacturing sector such as machine shops, specialty job shops and other manufacturing services.
- AMCA Certified companies are committed to the 'Buy American' movement by giving preference to U.S. raw materials, supplies and equipment in their production processes, when it is financially feasible.
- AMCA Certified manufacturers are overseen 24/7 by a U.S. based accreditation body that is independent of all overseas entities and foreign governments.
- Firms achieving AMCA Certification are also compliant to ISO 9001:2015 standards for added assurance and oversight, while remaining compliant to AMCA's strict quality requirements and pro-American guidelines.

This letter, presented in faith, is an appeal to congress to recognize and support 'AMCA Certified Companies' as highly capable government contractors committed to the American economy and the American people.

Respectfully,

Donald LaBelle, AMCA Founder
